DO YOU AGREE WITH THE FOLLOWING STATEMENTS?

LMF BUSINESS ARCHITECT LEADERS PRACTICE GROUP 18th January 2024 POLLING

<epam>

The world continues to evolve and in recent years, Large Transform Programmes, Waterfall Deliveries, and Enterprise Architecture have all seen a decline or even demise to some extent or another. Agile methods, the promise of delivery velocity, and greater local/team/scrum decision-making and have risen and become the popular standard.

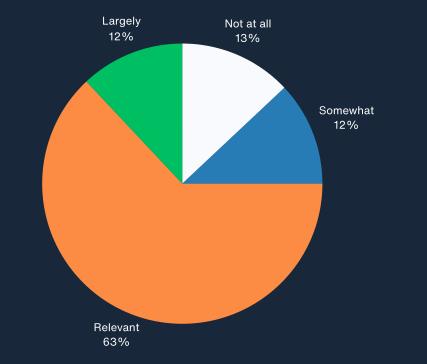

POLLING

<epam>

Whilst agile brings an array of delivery advantages (delivery velocity, iterative steps, regular business feedback, enables fast fail, etc), the way in which it can often be adopted it is not without its disadvantages (adoption maturity is low, focus favours velocity over strategy, newly empowered POs need to keep their backlog busy to demo value, architects that operate across the enterprise are under pressure NOT to slow things down, tech/org debt increases quickly as too many things get determined within a sprint, ...)

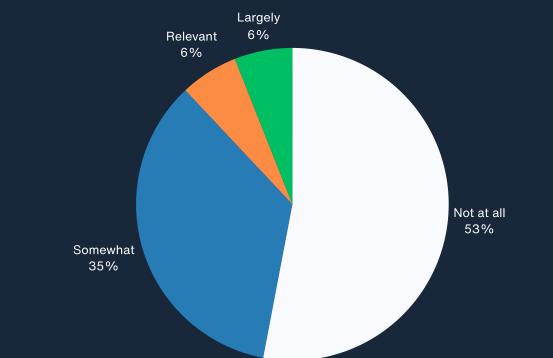

POLLING

<epam>

The enterprise view across departments, teams, and platforms, marries nicely with the governance, decision-making cadence, and autonomy within the agile delivery teams, and there is good alignment of strategic objectives and delivery of aligned value up and down the organisation.

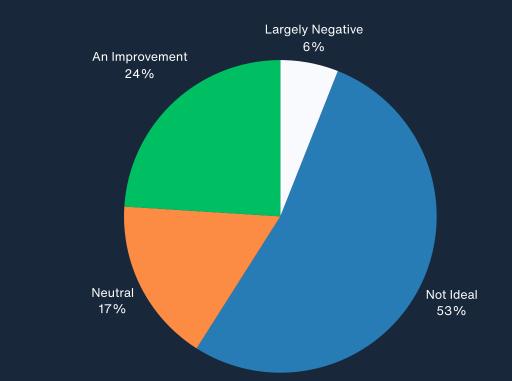

POLLING

<epam>

The impact of these recent delivery and organisational changes and the way in which we design, govern, prioritise and deliver business and technology projects is now smooth and efficient, and generally operating well, without friction, and delivering clear and optimal value.
