AGENDA

- **8.30 am:** Welcome & introductions
- **8.40 am:** Polling
- **8.50 am:** Panel Discussion - Guest speakers
Tom Downs & Duncan Fraser
- **9.15 am:** Breakfast
- **9:45 am:** Roundtable discussion
- **10:25 am:** Conclusion
- **10:30 am:** Close

What is the difference between AI and Generative AI?

The primary difference between Generative AI and Traditional AI lies in their objectives and functioning. While Traditional AI aims to perform specific tasks based on predefined rules and patterns, Generative AI goes beyond this limitation and strives to create entirely new data that resembles human-created content.

By analysing historical data, generative AI models can identify risk factors and predict potential risks with greater accuracy. Insurers can leverage this information to develop comprehensive risk assessment frameworks, resulting in more tailored coverage and enhanced pricing strategies

ROUNDTABLE

- When developing a strategy and business case for implementing Gen AI, what critical factors should businesses prioritize?
- Discuss the potential risks, biases, and privacy concerns associated with Gen AI systems and propose strategies to address them
- As we look ahead to the future, what are your thoughts on the emerging trends in the field of Generative AI and how they might influence business transformation?
